4. UNOLS’ POST CRUISE ASSESSMENT REPORTS
SECTION A - INTRODUCTION

1. GENERAL INFORMATION

The research vessel (R/V) F.G. WALTON SMITH is owned and operated by the University of Miami’s Rosenstiel School of Marine and Atmospheric Science (RSMAS). The R/V WALTON SMITH is a Coastal/Local Class vessel of the University-National Oceanographic Laboratory System (UNOLS) fleet.

This cruise-planning manual has been developed to provide the ship’s user with the arrangement and operational capabilities of the R/V WALTON SMITH. The manual delineates the various procedures, policies, regulations, safety, and lifesaving precautions for embarked personnel. All ship users should review this manual with regard to the specific requirements of the proposed project. As well, it is encouraged you review the UNOLS Research Vessel Safety Standards (RVSS) which can be found on the UNOLS website at https://www.unols.org/document/research-vessel-safety-standards-rvss-tenth-edition-july-2015. The RVSS provides the safety standards followed aboard the R/V WALTON SMITH.

If there are, any items required for a project that are not delineated in this manual or in the RVSS please contact any of the personnel listed in the Directory of Marine Operations Personnel. Comments and/or corrections that will help clarify any of this manual, or make it more user friendly, are welcome.

It is the sole purpose of the R/V WALTON SMITH’s support personnel to provide you with the very best platform and equipment to accomplish the scientific goals of the project. We are here to support your project and give you an exceptional cruise experience.

Welcome Aboard

Rear Admiral Richard Behn, NOAA (Ret.)
Director, Marine Operations

3. LOCATION, LOCAL SERVICES, and MAILING/SHIPPING LOGISTICS

Location
The map below shows the local Miami area and where the University of Miami’s Rosenstiel School of Marine and Atmospheric Science campus, or RSMAS, is located (“A” star on map). The RSMAS campus is on the southeast corner of Virginia Key, next to the Miami Seaquarium. The address is 4600 Rickenbacker Causeway, Miami, FL, 33149-1031. RSMAS serves as the homeport for the R/V F.G. WALTON SMITH.

If you are flying to the area the closest airport to RSMAS is the Miami International Airport (MIA airport code) which is located 13 miles northwest of the RSMAS campus (upper left corner in map above). An alternative airport is Fort Lauderdale/Hollywood International Airport (FLL airport code) which is located 32 miles north of RSMAS. For U.S. domestic flights, FLL has a tendency to be less expensive than flying into MIA. Both airports can provide regular taxi service to RSMAS. Both airports offer Uber or Lyft services that offer a much cheaper alternative than regular taxis. Car rentals are available at each airport.

If driving by car to RSMAS, the Rickenbacker Causeway, the roadway RSMAS is located on, is a toll road. The tollbooth offers only payment with an electronic toll
collection unit called SunPass or a “toll by plate” option. We recommend the option of renting a SunPass unit from the car rental company.

After the toll plaza, you will go over a large bridge. Once over the bridge you are now on Virginia Key. The RSMAS campus is located at the second traffic light on the right side. Upon entering the campus, please stop at the Campus Safety shelter (to your left as you enter the campus) for a parking pass and directions to the ship.

Local Services
The area around the RSMAS campus offers all amenities that can be expected when in a large city. The closest area for shopping and dining is the town of Key Biscayne, located approximately 4 miles southeast from RSMAS. There is an abundance of the same services offered in the nearby communities of Brickell (5 miles northeast) and Coconut Grove (8 miles southwest).

There are many options for lodging in the area. The closest hotel is the Hotel Urbano Miami, 2500 Brickell Avenue, 877-765-0926 (http://www.hotelurbanomiami.com/default-en.html). This is the closest hotel to RSMAS (3 miles) however; there are not many amenities close to this location. We recommend staying in the community of Coconut Grove with its many hotel choices and an abundance of restaurants, nightlife, cinemas, and many other amenities (most within walking distance of each other).

Hotels in the Coconut Grove area include:

Hampton Inn, 2800 SW 28th Terrace, Coconut Grove, 305-448-2800 http://www.hamptoninnoconutgrove.com/

Courtyard by Marriott, 2649 South Bayshore Drive, Coconut Grove, 305-858-2500 http://www.marriott.com/hotels/travel/miagv-courtyard-miami-coconut-grove/

The Mutiny Hotel, 2951 South Bayshore Drive, Coconut Grove, 305-441-2100 http://www.providentresorts.com/mutiny-hotel/

The Sonesta, 2889 McFarlane Road, Coconut Grove, 305-529-2828 https://www.sonesta.com/us/florida/miami/sonesta-coconut-grove-miami

Mailing/Shipping Logistics
Arrangements must be made with Marine Operations for the receiving, shipping and storage of equipment and/or material for your upcoming cruise. Contact Marine Operations to ensure proper handling and storage of all your equipment.
Marine Operations has limited storage space on campus thus, it is requested you do not ship equipment too far ahead of time. Freight deliveries are accepted Monday to Friday from 0900 to 1600. Prior arrangements must be made for shipments received outside these hours.

Forklift and crane equipment is available for shipments with individual items weighing no more than 8,000 pounds. For individual items weighing over 8,000 pounds, it will require outside services (forklift, crane, and dockage services) for loading and unloading. The project will be responsible for any additional charges (forklift, crane, dockage, etc.) incurred when loading/offloading heavy loads.

For mail and freight deliveries/pickup, please use the following information:

All mail and overnight deliveries should be addressed to:
University of Miami/RSMAS
Marine Operations (hold for “Your Name”)
4600 Rickenbacker Causeway
Miami, FL 33149-1031
305-421-4832

All freight delivers should be addressed as follows:
University of Miami/RSMAS
Marine Operations
4600 Rickenbacker Causeway
Miami, FL 33149
305-421-4832
For R/V F.G. WALTON SMITH Cruise # XXXXX
Hold for: [P.I.’s NAME]

All shipments must be prepaid. No CODs can be accepted.
SECTION B - CONFIGURATION AND EQUIPMENT

1. GENERAL

The University of Miami took delivery of the R/V F.G. WALTON SMITH in January 2000 from Eastern Shipbuilding Group at Panama City, Florida. The R/V WALTON SMITH operates under the Code of Federal Regulations, 46 CFR Subchapter "C" (Uninspected Vessels) and a carries a USCG letter of designation as an oceanographic research vessel.

2. R/V F.G. WALTON SMITH CHARACTERISTICS

LOWER DECK

MAIN DECK
5. WINCHES AND WIRE

Two Hawboldt SPR-2840/S winches are installed on the aft 01 deck. The winches are hydraulically operated by electronic controls from the aft control station (winch cab located on the 01 deck) or a mobile control box, which allows operation of the winches from the 01 deck, the main deck, the wet lab or dry lab.

A portable Hawboldt SPRE-2530/S fiber optic winch is available by request. Please provide advance notice to Marine Operation for use of this winch to allow for testing, repair, calibration and loading of the winch aboard.

*Maximum Permissible Tension is limited by the breaking strength of the tension member at a Factor of Safety = 2.0.

**Current length will lessen with routine testing, cutbacks and for other various reasons.

Please contact us for additional information or if different wire/cable is required.
6. **SHIPBOARD CRANES**

The shipboard cranes are mounted on the aft 01 deck on the port and starboard sides. The cranes are positioned to service operations on the aft main deck and 01 deck. The cranes have a maximum capability of 4,500 lbs. at a 5’ radius. At full extension, or 20.5’ the maximum capability is 3,300 lbs. The maximum capabilities of all components of this and other vessel systems have been carefully reviewed and are available. For the shipboard cranes, this includes the base or pedestal, crane arm, crane winch, crane wire and ball end.

7. **STERN “A” FRAME**

The main deck hydraulic A-frame on the stern is designed for a maximum capability of 10,000 pounds in the deployed position. The maximum capability is 5,000 pounds while luffing, or when not in the fully deployed stops. There is a hydraulic Pullmaster winch on the A-frame to assist in handling instruments, moorings, etc. over the stern. It has a maximum capability of 5,000 pounds. Limitations are by the maximum capability of the cable. Vertical and horizontal clearance is 20 feet.
8. UNIQUE VESSEL FEATURES

The aft main deck has a unique “notched stern” design (pictured right). During routine operations, this section is covered. With the notched stern cover removed, it facilitates the deployment of larger instruments requiring use of the stern A-frame.

The aft main deck is also equipped with a “moon-pool”. This is located between hull’s pontoons (pictured left) and can be opened for transducers or other equipment needs.

Both features of the R/V WALTON SMITH must be discussed and requested during pre-cruise planning and noted in the Cruise Configuration form.

Vessel control stations are located on the bridge, on the bridge wings, and at the aft winch control station on the 01 deck. These stations are utilized during underway operations. This improves communications with deck crew and science participants during deployments.

9. OTHER EQUIPMENT

**POSMV**

The POSMV precisely measures position, attitude, heading, heave and velocity. The data from the POSMV can be made available to the science party upon request.

**ADCPs and Science Echo Sounders**

The vessel also boasts an impressive suite of oceanographic transducers. Dual Acoustic Doppler Current Profilers, or ADCPs, provide sophisticated ocean current measurements. The Teledyne RD Instruments transducers are the 600 kHz Workhorse...
Mariner and the 75 kHz Ocean Surveyor. The ADCPs measure high precision currents in varying ocean depths, up to 800 m.

A Knudsen Engineering 7 X 3.5 kHz transducer array is available for sub-bottom profiling. Two (2) Knudsen MiniSounders, 28 kHz and 200 kHz, are available for scientific observations. A 1200 kHz Workhorse Mariner is also available for the swivel pole system. These science Echo Sounders are also available to the bridge for additional navigation purposes.

**Swivel Pole System**
The vessel is equipped with a swivel pole. The pole allows users to mount various transducers to the end of it. Once the transducer is in place the swivel pole “swings into place” into the water. We have many transducer mounting plates available. Please provide ample notice if any pole mounting is desired for shared use equipment, or science supplied systems.

**Sea Surface Flow-Through System**
A sea surface flow-through system is available in the wet lab. (Laboratory spaces are described in the next section.) This PVC-based system collects seawater from intakes at the bow. Several sensors are installed in the suite for underway data collection. Two connections are available for science-supplied instrumentation in the manifold in the wet lab.

The following instruments are installed in the bow flow-through system:

- Sea-Bird Electronics MicroThermoSalinoGraph (SBE 45 MicroTSG)
- Sea-Bird Electronics Digital Oceanographic Thermometer (SBE 38)
- Seapoint Fluorometers – chlorophyll (SCF) & CDOM (SUVA)
- Turner Designs C6 multi-sensor platform with chlorophyll, CDOM, crude oil, phycoerythrin and phycocyanin. and optical brighteners
Meteorological Suite
The meteorological suite includes wind speed and direction, air temperature, relative humidity, barometric pressure, and solar radiation. The weather stations are manufactured by R.M. Young Company. Radiometers are manufactured by Eppley Laboratories. A Li-Cor PAR is available upon request and may require pre-cruise calibration.

Over-the-side systems
- Sea Bird 911plus CTD system
  - auxiliary sensors include fluorometer, transmissometer and dissolved oxygen
  - Twelve 10L Niskin bottles on a Sea-Bird Carousel for water sampling
- 1m MOCNESS (Multiple Opening Closing Net Environmental Sampling System)
  - compliment of up to 9 nets with two mesh sizes, 153 µ and 335 µ
- Coring
  - Benthos Gravity corer
  - Piston corer
  - Bottom sediment grab

10. LABORATORIES

DRY LAB – The dry lab consists of 480 sq. ft. of air-conditioned space. Most bulkheads are fitted with Unistrut to allow for repositioning of lab equipment. Bench tops around the perimeter of the lab were stainless steel while the central table are Formica laminate. Electric services include 110 VAC and UPS 110 VAC. Other services include hot and cold fresh water, PVC uncontaminated seawater, and an ice machine that can produces flake ice. The centrally located dry lab offers direct access to the galley (forward), staterooms (port & starboard), and wet lab (aft).
WET LAB – The wet lab consists of 200 sq. ft. of air-conditioned space located just aft of the dry lab. There is direct access to the aft main deck. Bulkheads are fitted with Unistrut to allow for repositioning of lab equipment. Electric services include 110 VAC and UPS 110 VAC. Other services include hot and cold fresh water, uncontaminated seawater (PVC), and scientific grade, ultra-pure, de-ionized water (greater than 18 megΩ).

Portholes allow visual access to the aft main deck for safety purposes and observation. Freezer and refrigerator space is available in the wet lab. Additional or non-standard freezer or refrigerator requirements should be included in the Cruise Configuration Form. Non-standard requirements should be addressed as early as possible during pre-cruise planning.

11. NAVIGATION SYSTEMS

✓ Positioning Systems
  o Bridge:
    - Raytheon RayPlot 320 WAAS GPS receiver
    - Furuno GP90 GPS associated with Furuno FA-100 AIS
    - Applanix POS/MV 320 v4

✓ Position Plotting System
  o Kongsberg Simrad Planning Station – CMAP display software.

✓ Echo Sounders
  o (2) Furuno FCV-620 50/200 kHz located on the bridge
  o Scientific Echo Sounders also available to bridge (Section B.9)

✓ Radars
  o Furuno model FR-2115 “Black Box” ARPA Radar – X Band up to 96 miles with 18 inch flat screen color display; Azimuth stabilized with GPS input
  o Furuno model FR-7112 ARPA Radar – X Band up to 72 miles with monochrome display; Azimuth stabilized with GPS input
  o Furuno model FR-1833C – Radar repeater located in winch cab

✓ Gyro Compass
  o S.G. Brown model Meridian system consists of a transmission unit, master compass, power adapter and static converter.
Autopilot
  o Simrad AP70 with input from POS/MV

Wind Speed And Direction
  o RM Young Windbird

12. COMMUNICATIONS
All shipboard communication equipment supports scientific projects and the safe operation of the ship. The Captain is responsible for all ship-transmitted communications.

Voice Communications
✓ VHF Radio
  o Two ICOM ICM-127 25 Watt transceivers on bridge
  o One Standard Horizon 25 Watt transceiver in winch cab
  o Two 5 Watt handheld transceivers are available
  o All VHF channels are available, Channel 16 monitored at all times
  o User-provided boats must supply their own VHF transceivers

✓ Cellular Service
  o The scientific party is encouraged to bring their own cellular equipment. The ship’s cell phone is available for use by the scientific party when cellular service is available. The Captain’s approval is required; this service is available for ship and scientific operations only.

✓ Fleet Broadband Satellite System
  o Voice and data can be transmitted via this backup system. Limited to use for ship’s business and scientific projects requirements. Excessive use may be billed to the project.

✓ Iridium Satellite Phone
  o Iridium EuroCom satellite phone service is available for voice, fax, and data communication. Service is available from coastal waters to 200 miles offshore and throughout the Bahamas and the Caribbean. Limited to use for ship’s business and scientific projects requirements.

Data Communications
✓ HighSeasNet Satellite System
  o A continuous shore-side data link is provided. Access to the system is through a wireless access point located in the Dry Lab. Bandwidth is limited so multiple, simultaneous users slow the connection speed.
  o Web based email accounts are accessible via this system.
  o Costs for this service are included in the vessel daily rate.

✓ Fleet Broadband Satellite System
  o Data access to this system is provided through a hardwire connection in the Chief Scientist’s cabin. This system serves as a backup to the HighSeasNet System. Costs for this system are based on the amount of data transferred.
✓ **AT&T Wi-Fi Connection**
  o A Wi-Fi router is also available for all users, but is limited to cellular range. If the ship is docked or near shore, the connection is much faster, reliable and can accommodate multiple users with ease.

13. **WORKBOATS**

The workboat aboard the R/V WALTON SMITH is a 16 ft. foam collar (center console) aluminum RHIB with a 90 HP Yamaha outboard.

Additional boats may be provided depending upon the availability at the time of the request. Additional boats may be stored on the aft main deck or on the 01 deck.

Other workboats available are: 15’ foam collar (center console) H-RIB w/90 HP Yamaha outboard or 15’ Boston Whaler (center console) w/ 40 HP Yamaha outboard.

14. **USER-PROVIDED BOATS**

All boats not provided by RSMAS Marine Operations must be outfitted to the following standards and in accordance with the Code of Federal Regulations statute, 33 CFR 174,175:

- Vessel must possess a current state registration
- There shall be a type I or II personal flotation device (PFD) for each person aboard
- All user-provided boats 16 ft. and over are required to carry one (1) type I or II PFD for each person on board plus one additional type IV PFD

In addition, the following items must be aboard user-provided boats:

- working VHF transceiver
- adequate paddle/oar
- adequate anchor with at least 100 feet of line attached
- sound signaling device (either horn or whistle)
- flares
- distress flag
- working navigation lights

The R/V WALTON SMITH PFDs cannot be used on user-provided boats. RSMAS Marine Operation’s outboard motors cannot be used on any user-provided boat.
SECTION C - TECHNICAL SUPPORT

1. EQUIPMENT USAGE

Oceanographic Instrumentation is often procured via a National Science Foundation (NSF) award. NSF purchased equipment is considered “Shared-Use” for all R/V WALTON SMITH participants as well as other UNOLS member institutions, the academic fleet and may be available to projects supported by other funding agencies. Consult the RVWS Configuration and Cruise Plan for available equipment and detailed information of equipment available.

2. MARINE TECHNICIANS

While aboard the R/V WALTON SMITH, a Marine Technician (tech) will be available to you up to twelve (12) hours per day. A portion of the vessel’s daily rate includes the cost of a tech. These tech rates are negotiated annually via the NSF Oceanographic Technician Support Grant. The rate remains the same for all vessel users, regardless of funding agency. Additional tech support beyond the normal 12 hours per day requires written approval from the Chief Scientist. Costs may be billed separately to the respective project.

The tech’s primary responsibilities include maintenance and repairs to shared-use equipment (per NSF guidelines), vessel mounted instrumentation and deployed instrumentation. Techs often act as liaison between the vessel crew and the scientific party, with particular attention to over-the-side operations. Assistance is provided to the scientific party, as needed, with support of the ship installed scientific data collection system, communications, and shipboard computers and/or network. The techs do not support routine watch standing, routine operation of winches or underway sample collection. However, it is their responsibility to train inexperienced science participants in the proper, safe handling and usage of the equipment.

Marine Operations will determine the minimum number of techs assigned to any particular cruise, based on equipment requests outlined on the RVWS Configuration Form and Cruise Plan. Typically, one tech is assigned to a cruise aboard the R/V WALTON SMITH.
SECTION D - DIVE OPERATIONS

1. RESEARCH DIVING

Scientists and/or researchers conducting diving operations from the R/V WALTON SMITH must operate under the rules as set forth in the UNOLS Research Vessel Safety Standards (RVSS), Chapter 11, Diving Operations. Scientists and/or researchers must also operate under the auspices of a formal research diving program that is recognized by the UM/RSMAS Diving Control Board as meeting the minimum standards of the American Academy of Underwater Sciences (AAUS) policies and procedures manual. If a non-UM scientist or researcher intends to conduct scientific diving during their expedition, and their home institution does not operate a formal diving program, participants must comply with the University of Miami's diving policies and procedures. A copy of these policies and procedures are available from the UM Dive Office and online at the UM Dive Office website.

All personnel intending to dive must read and accept the University of Miami's Diving Safety Manual. A Dive Plan must be submitted to the UM Dive Safety Officer at least 30 days prior to cruise departure. The Diving Safety Manual and Dive Plan forms are available at the UM Dive Office website.

Visiting scientists from institutions whose diving program is an organizational member of the AAUS will be allowed to dive with a UM program, or from a UM vessel, upon submitting a letter from their respective institution's Dive Officer stating each participant:

- is currently authorized with their institution’s program;
- holds a current dive physical;
- holds a current CPR & First Aid and Oxygen Provider certification;
- has been diving within the past six months;
- has proof of insurance for hyperbaric oxygen therapy;
- has a letter of self-insurance stating the diver is covered by the home institution's workman's compensation program; and
- is approved to dive by the institution’s Diving Safety Officer

The UM/RSMAS Diving Safety Officer reserves the right to request additional information or requirements.

Visiting scientists from institutions that lack a formal diving program, or are not organizational members of the AAUS, must complete the Basic Diver Checkout Procedure, Section 4.41 in the UM/RSMAS Diving Safety Manual.

All policies, procedures and forms are available from the UM Dive Office and online at the UM Dive Office website.
SECTION E - HAZARDOUS MATERIALS

1. RADIOISOTOPES

All Radioisotope experiments must be conducted in a controlled Radioisotope Van (Rad Van). The van must be loaded on the 01 deck of the R/V WALTON SMITH. Careful adherence to all radioisotope procedures is imperative. Monitoring must be completed routinely during the cruise. UNOLS’ has a Radioisotope Awareness Program for all scientific personnel. For more details on the program, please visit the UNOLS Radioisotope Awareness Program website.

Authorization: A statement is required from the Principal Investigator’s home institution’s health physicist, or authorized representative, for radioisotope use stating the investigator is certified to possess and use the isotopes involved in the proposed project. Only approved investigators may work with radioisotopes.

Experimental protocol: A detailed protocol of the proposed experiment must be provided. Specify such details as manipulation procedures, planned location for work, arrangements for isolation and contamination monitoring procedures of the nuclides to be used and their amounts, forms and concentrations. Explanatory figures and diagrams should be included.

Statement of Use: Following the cruise, a statement of use must be sent to University of Miami’s (UM) Radiation Control Center (contact information below). This statement must show amounts of nuclides: 1) taken aboard the ship, 2) disposed of upon returning to port, and 3) unused and removed from the ship by the investigator.

Waste disposal: Investigators will provide a statement of the procedure to be followed for collecting, storing and disposing of all radioactive waste generated during the experiments. The UM is specifically prohibited from disposing of ANY radioactive waste at sea under the terms of its State of Florida license. Therefore, all waste must be returned to shore for disposal by the investigator's home laboratory or at the UM provided prior arrangements were made with the UM’s Radiation Control Office.

Monitoring: A comprehensive series of radiation safety wipe samples (100 cm²) must be collected by the investigator both before and after radioisotope use. The entire area should be thoroughly tested and measure using the Liquid Scintillation Counter provided in the van.

The location of the wipe test samples should be indicated on a map of the working area. Results of wipe testing must be forwarded to the UM Radiation Control Center within 3 days after the end of the cruise.

In addition to the monitoring required of the investigator the UM’s Tritium Laboratory conducts pre-cruise and post-cruise monitoring procedures. This includes a SWAB test, a more sensitive test than general wipe tests. SWAB testing indicates contamination
using a range varying from trace levels for successive projects, up to human health hazards. Previous SWAB tests are available upon request. In any case, investigators are responsible for proper monitoring and clean up.

**Costs associated with cleaning Rad Van or vessel spills or contamination will be billed to the PI.** Non-reported spills or improperly monitored and/or cleaned work areas may result in the revocation of the responsible person’s authorization from conducting further radioisotope projects aboard the vessel, as well as any UM facility.

Send all required information to Mr. Edward Pombier, UM Radiation Safety Officer (with a copy to Marine Operations):

**RADIATION CONTROL CENTER**
Mr. Edward Pombier, R.S.O.
University of Miami
Radiation Control Center
P.O. Box 016960 (R 61)
Miami, FL 33101
Phone 305-243-6369

**UM MARINE OPERATIONS**
Marine Operations
University of Miami
4600 Rickenbacker Causeway
Miami, FL 33149-1031

**2. EXPLOSIVES, UNDERSEA SONIC EMITTERS AND DRAGGED DEVICES**

**Explosives:** The use and handling of explosives is restricted to persons possessing proper training and certification. Explosives cannot be loaded or unloaded in the Port of Miami. Loading explosives in U.S. ports is supervised by the U.S. Coast Guard’s Captain of the Port. The Captain of the Port for the port you are departing from requires the following, at least 8 weeks prior to departure:

1. Explosive handling facilities for loading
2. Date of Loading
3. Supplier and copy of explosive order
4. Carriers certificate for packing
5. Unit quantity of each type of explosive and hazardous material
6. Unit packaging dimensions and weight
7. Unit identification as listed in 46 CFR 146-149
8. Magazines to be provided, material dimension and weight
9. Magazine markings
10. Name of certified shooter
11. Shooting safety procedure

**Undersea Acoustic Transducers:** The National Geospatial-Intelligence Agency (NGA) is the point of contact for ship operations that use sonic emitters, towed devices, explosive charges, or deploy moored instrumentation. These items could pose a hazard to the safe navigation and operation of submarines, or to surface vessels, particularly those engaged in fishing, towing or other research work. The Principal Investigator must
contact the NGA at least 2 weeks prior to departure of their cruise aboard the R/V WALTON SMITH. The NGA disseminates the information through the “US Notice to Mariners” which corrects navigational charts and publications, both domestic and foreign. The agency also disseminates Broadcast Warnings in support of the Global Maritime Distress and Safety System (GMDSS) to ensure timely distribution of information for the safety of life at sea, as well as directly to appropriate naval commands. Providing the information to the US Coast Guard’s Aids to Navigation Office in the appropriate district, as well as to local Naval Commanders, in some cases, may improve the level of notification and coordination between offices. Visit the NGA Maritime Safety Information website for more details and filing information.

3. MATERIAL SAFETY DATA SHEETS

Federal Occupational Health and Safety Administration (OSHA) rules require chemical manufacturers, importers and distributors properly label hazardous chemicals for use, storage and emergency procedures. Principal Investigators must provide a list of all chemicals to be used during their cruise. Any hazardous material brought aboard the R/V WALTON SMITH must be accompanied by the appropriate Material Safety Data Sheets (MSDS). A copy of the MSDS must be provided to the Captain for informational purposes in the event of an emergency. In addition, the Chief Scientist must brief all persons on board who will be exposed to such materials (called “Right To Know”) in the general physical and health hazards involved, appropriate protective measures, clean up procedures, and potential injuries resulting from exposure to the material. All MSDS’s will be posted in the dry lab and/or wet lab as appropriate.

4. LITHIUM BATTERIES

In May 2012, the UNOLS’ Office released a Circular on an increasing prevalence of Lithium batteries in oceanographic research. These batteries can be very useful, but also very dangerous. The UNOLS Research Vessel Safety Standards (RVSS), Chapter 9, Scientific and Shipboard Hazardous Materials, address issues resulting from lithium battery handling, usage, storage and disposal aboard UNOLS vessels. The UNOLS Lithium Battery Safety Circular and the Woods Hole Oceanographic Institution's Lithium Battery Safety Procedure provide more details about these procedures. The R/V WALTON SMITH follows the procedures noted above. If you are going to bring lithium batteries aboard the R/V WALTON SMITH, you must abide by the procedures noted in the documents referenced. Each chief scientist must bring the proper storage units for their batteries, be properly trained in the use of the batteries, and bring/provide the proper fire-fighting agent for the batteries you will be bringing aboard.

5. MARINE MAMMAL PROTECTION ACT

All vessels must comply with the Marine Mammal Protection Act and Endangered Species Act. Low and mid-frequency sonar and other acoustic studies have been identified as having potentially severe impacts to marine mammals. If you plan to conduct acoustic research, please visit the UNOLS website for permit and permission resources. The UNOLS website also has many links to NSF and NOAA guidelines for permitting and clearances.
SECTION F - VESSEL OPERATIONS

1. CREW

The R/V WALTON SMITH is operated by an experienced, competent and safety-oriented crew. The crew is comprised of the Vessel Master (aka Captain), Chief Mate, Engineer, Second Mate, Assistant Engineer/Third Mate, Steward and Marine Technician. All but the steward and the technician are qualified to operate the vessel. All are experienced in oceanographic research and myriad of science disciplines. The Chief Scientist is requested to report and discuss any problems with equipment, personnel and/or procedures with the Captain as soon as they are identified. The Chief Mate can also address most issues in the Captain’s absence or off-watch period.

2. OPERATING HOURS

While underway, the R/V WALTON SMITH can operate 24 hours/day, 7 days/week.

3. OPERATING DAYS

Operating days include all days, or any part thereof, which the vessel spends away from the port of embarkation. For safety, departures and returns to/from ports are normally accomplished during daylight hours. Departures and arrivals from the RSMAS pier are also subject to tide conditions. Chief Scientist’s must request the required number of operating days via a UNOLS’ Ship Time Request that can be found on the UNOLS Website.

4. STAGING/LOADING & UNLOADING (MOB/DEMOB)

The R/V WALTON SMITH can MOB/DEMOB in almost any port. MOBing may begin as early as 0800 on the day prior to the scheduled departure day. When crew assistance is not required, MOBing will not interfere with ships’ maintenance or repair work, and/or the prior cruise’s scientific equipment is off loaded, the laboratories and deck areas will be available for equipment set up. MOBing, which continues beyond 1600 of the scheduled day of departure, along with required crew rest, may prohibit departure that day. Special MOBing requirements can be met provided they are included in the UNOLS Ship Time Request and the RSMAS Cruise Configuration forms. Most importantly, communicating these and other pre-cruise needs to Marine Operations as the departure date nears will augment a seamless and timely departure.

5. MEALS AND CLEANING

The R/V WALTON SMITH provides three meals per day while at sea and in any port away from RSMAS. While at sea, meals are served at times posted on the Mess Deck. Depending on the workload, 2 meals, a day (brunch and dinner) may be served while in port other than at RSMAS. Meal times may fluctuate to accommodate operations. If a time change is desired, please notify the Steward as early as possible.

It is our desire to provide healthy, nutritious meals and snacks for all. We proudly display our 2011 and 2013 “Best Grub Award” from the National Science Foundation. While most dietary requests can be accommodated (i.e. dietary restrictions, vegetarian meals, allergies, etc.) advance notice is greatly appreciated for planning purposes.
Special requests must be submitted to Marine Operations two weeks prior to the cruise departure.

The Chief Scientist is responsible for assigning specific duties to the scientific party for areas to be cleaned which include scientific staterooms, heads/showers and labs. Cleaning supplies are available upon request from any crewmember.

A washer/dryer aboard is available for personal items. Laundry detergent is provided.

6. GARBAGE AND TRASH

In accordance with Federal regulations, the R/V WALTON SMITH has a Waste Management Plan for control of all waste material. All members of the scientific party should become familiar with the plan.

- All plastics will be separated and held onboard for the duration of the voyage. Upon return, these will be disposed of or recycled in accordance with local regulations.

- During operations beyond 12 nautical miles from shore, organic garbage (food “slops”) may be disposed of overboard. A “slop” container is kept in the galley. The Steward will familiarize you with our routine food waste.

- During operations within 12 nautical miles from shore, all garbage will be held onboard. Upon return to port, the garbage will be disposed of in accordance with federal, state, and local regulations.

- It is illegal for any vessel to dump plastic trash of any kind, anywhere in the ocean or navigable waters of the United States.

The crew will review this Waste Management Plan with all embarking personnel during the initial Safety Briefing at the start of the cruise. Please refer to the Pollution Prevention placards posted in the mess area and throughout the vessel.

7. BERTHING

The R/V WALTON SMITH is designed to carry up to 12 scientists and 7 crew. Additional crew for increased scientific operations will require a reduction in the available scientific berths. The Chief Scientist is responsible for assigning berths for the scientific party. Male and female scientists may not share staterooms. Berthing for the scientific party can be made available the night before the scheduled departure date, but please check and confirm this option with Marine Operations first.

Depending on the vessel’s turnaround time, there may be times when scientists from the previous cruise remain on board for an additional day.

You will more than likely be sharing a small stateroom with at least one other, and it is best to get off to a good start by following these guidelines:

- Keep your personal things neat and contained;
- Clean your linen regularly and keep your bunk made;
• Keep your room clean and in order; and
• Before inviting a guest to your room, make sure your cabinmate has no objections.

Keeping yourself and your clothing presentable will help to assure your welcome among your shipmates.

8. SAFETY AND RESPONSIBILITIES

Safety is a culture that is strictly abided by aboard the R/V WALTON SMITH. The command and crew do not take safety lightly. They strive to eliminate all possible accidents, or potential hazards. Awareness of one’s surroundings is key in this sometimes challenging and dangerous environment. All accidents and/or injuries must be reported to the bridge as soon as possible.

The Captain, by Maritime Law, has ultimate authority over all persons assigned to or embarked on the ship. The Captain has full responsibility for the safety of the vessel and all personnel aboard. The Captain is vested with the authority to take whatever action he/she deems necessary to preserve and maintain the safety and integrity of the vessel and all personnel, including but not limited to: handling of small craft, diving and/or snorkeling activities, weather, navigation hazards and machinery malfunctions. Enforcement of policy, safety standards, and compliance with the laws of the territorial waters, in the vessel’s area of operation, is the sole responsibility of the Captain.

Violations or circumvention of safety standards or local laws may cause termination of the cruise and immediate return of the vessel to port. The Captain has the authority to determine violations or circumvention. The Chief Scientist is required to advise the Captain of all-special permit licenses, clearances, etc. issued to the project regarding the collection of data or other scientific activities.

It is the Chief Scientist’s responsibility to notify participants of the following required reading for all embarked scientific personnel on a UNOLS vessel. The UNOLS’ Research Vessel Operators Committee (RVOC) Safety Training Manual (Chapter 1) highlights safety matters aboard research vessels. Prior to arrival, the Chief Scientist should request all scientists sailing view the RVOC Safety Training Manual that is available on the UNOLS website. Copies of the manual are aboard the vessel and available for reading.

The Captain is required to provide information, orientation and demonstrations of the safety equipment and emergency procedures aboard the vessel. A safety briefing, combined with a fire and abandon ship drill, will be held either before or very shortly after departure. All embarked personnel are required to participate. Life jackets must be worn at all drills. Assignments for all drills and emergencies are listed on the station card located on each bunk.

Emergency drills will likely occur during your cruise. Science party members are notified in advance to avoid disruption of the program. Anyone who must continue working may be excused by prior arrangement with the Captain through the Chief Scientist. While on board, keep in mind that you may be called upon without warning to assist during your off-watch period, and an emergency can occur at any time.
1. SHIP TIME REQUESTS & SCHEDULING

To obtain ship time aboard the R/V WALTON SMITH, each scientific project must complete a UNOLS Ship Time Request (https://strs.unols.org/Public/diu_login.aspx). It is prudent for scientists to submit their ship time requests early. Support for all projects is based upon the initial information provided in the ship time request therefore it is important to complete the request to the best extent possible at the time of completion. This information is reviewed by the UNOLS’s office, Ship Scheduling Committee, Marine Operations, and agency Program Managers.

Ship scheduling for the R/V WALTON SMITH is managed by RSMAS Marine Operations and coordinated with other institutions through the UNOLS’ Ship Scheduling Committee. Please do not hesitate to contact Marine Operations with any questions before submitting your Ship Time Request or with questions about scheduling. The R/V WALTON SMITH’s schedule may shift due to weather, funding, and/or to accommodate unexpected oceanographic events. PI’s will be notified of these possible changes and an agreed upon solution will be formulated and agreed to.

2. CONFIGURATION FORM & CRUISE PLAN

The Configuration Form & Cruise Plan form (or Config Form) is designed to inform Marine Operations and the ship’s crew about the requirements for the project. The form can be found online at the Marine Operations website. Of all the required forms, the Config Form has the most substantial impact on the success of the cruise. This form addresses instrumentation, dive operations, small boat usage and other information that can assist in identifying potential issues early on. The PI’s are encouraged to submit the Config Form as soon as received by Marine Operations. Preliminary drafts are encouraged. If some pertinent project information is unknown, an updated version can be submitted later. Early submissions allow preparation of equipment, and in many cases, allow modifications and/or additions of new equipment. The final version must be submitted no later than 45 days prior to the cruise’s departure. The date of submission may be used to resolve equipment request conflicts. Remember, portable equipment is designated as “Shared Use” and may be requested by other UNOLS’ member institution, vessel or RSMAS supported project.

3. PARTICIPANTS FORM

The RVWS Cruise Participants Form contains vital information for all those that are embarked on the ship for the cruise. This form must be completed two weeks prior to departure. The form can be found at the Marine Operations website. The participant form serves as a record of all persons aboard the cruise. The form is also submitted to the UNOLS Office post-cruise. Please note that each participants' nationality and classification (i.e. student, technician, etc.) is now required a minimum of two weeks prior to sailing due to regulatory export control compliance.
4. **FINANCING**

Principal Investigators holding Federal agency grants or contracts may be awarded ship time where costs are included in the Ship Operations Grant or in contracts between those agencies and the University of Miami. Other investigators should include ship costs, as determined by the RSMAS Marine Operations, within their grant budget. Commercial users will operate under a Time Charter Agreement. Rates for this agreement will be negotiated at the time the agreement is executed.

5. **FOREIGN OPERATIONS**

Principal Investigators are required to consult the U.S. Department of State’s Marine Scientific Research Authorization website for the proper procedures for requesting foreign clearances. Marine Operations will assist with the securing of clearances but it is the responsibility of the Principal Investigator to secure this clearance. It is important that the Principal Investigator submit the necessary information in time to allow the State Department to comply with the specific lead-time required by the host country, which may be six months or more, in advance. Once your clearance is obtained, please submit that appropriate clearance documents to Marine Operations, so the necessary permits can be obtained.

6. **PERSONNEL INSURANCE REQUIREMENTS**

The Principal Investigator and/or the Chief Scientist determine the makeup of the scientific party. Scientific party personnel must have an association with the scientific program as a researcher, research assistant, technician, observer or student. All participants in a cruise aboard the R/V WALTON SMITH are required to supply a certificate of insurance, Governmental Travel Orders, or a letter from their employer certifying coverage for Worker’s Compensation. It is the responsibility of the Principal Investigator and/or the Chief Scientist to ensure compliance with the University of Miami’s insurance requirements.

University of Miami/RSMAS students are insured and able to embark on the R/V WALTON SMITH. Participants from other U.S. institutions embarking on the R/V WALTON SMITH must be covered by their home institution’s Worker’s Compensation insurance.

All self-employed personnel or volunteers participating on a cruise on the R/V WALTON SMITH must be employed by the Chief Scientist's or Principal Investigator's home institution.

To comply with these requirements, self-insured institutions may use the proposed letter format that can be found at the Marine Department website (click on UM Certificate of Self Insurance Form). Please submit all certificates and/or letters to Marine Operations two weeks prior to the cruise’s departure date. Insurance coverage shall be provided for all the named individuals on the cruise and for the duration of the cruise. Marine Operations will communicate with UM Risk Management for approval. Please contact Marine Operations with questions or concerns.
7. CUSTOMS AND IMMIGRATION

Scientific personnel joining or departing the vessel in a foreign port are responsible for providing their own passports and obtaining required visas for the countries through which they will be traveling. Visit the U.S. Department of State website for details on visa requirements (in and out of a particular country), passports and international travel requirements. If you are to join a vessel in a foreign port, be sure to check with the embassy or consulate of that country if there is any doubt about required paperwork (visa, medical records, etc.) and what items may be taken into that country.

Before departing the United States, it is imperative that each person embarking have the required documents for entry back into the United States. The documents required for reentry can be found on the U.S. Customs and Border Patrol’s website.

All scientific personnel are responsible for obtaining inoculations and the associated records required for entry into foreign countries and return to the United States.

Upon return from a foreign port, all vessel personnel, including the scientific party, are required to remain aboard the vessel, without any contact with persons ashore, until U.S. Customs and Border Protection (CBP) officials clear the ship. Individuals are responsible for declaring to CPB all articles purchased or acquired in foreign ports during the cruise. Any person leaving the ship prior to the first return to a U.S. port after a foreign port call must take all dutiable articles with them.

If you are carrying scientific material, be sure to have the required documents from your Institution stating what the articles are, their intended use, and that they meet the proper export regulations.

It is recommended that all personal items of high value and foreign manufacture (items like cameras, watches, computers, etc.) be registered with CBP prior to departure from the United States. To register these items, obtain a CBP’s Certification of Registration for Personal Effects Taken Abroad (CBP form 4457) and follow the instructions provided.
SECTION H - WHILE ABOARD

1. RESPONSIBILITIES OF CHIEF SCIENTIST

The Chief Scientist is responsible for the coordination of the entire scientific mission while at sea. The Chief Scientist may be the Principal Investigator or may be a member of the scientific party.

The Chief Scientist must work and communicate with the Captain on a daily basis as to the plan of the day and execute the operations necessary to complete the project. The Chief Scientist, in coordination with the Captain, needs to solve any problems that may arise during the cruise. Problems are not limited to the scientific objectives but encompass all phases of the ship's operation and performance.

The Chief Scientist governs the personal conduct of the scientific party; however, the Captain has the final responsibility and authority for the operation of the ship and wellbeing of all aboard.

2. PERSONNEL RESPONSIBILITIES

Chief Scientists

Chief Scientists are
- responsible for the behavior of all members of the scientific party;
- must ensure that all members of the scientific party are aware of the ship’s and Captain’s guidelines;
- take action to ensure compliance; and
- report any possible violations to the Captain.

Sexual Harassment

The University of Miami is committed to providing an environment free from all forms of discrimination including sexual harassment. Sexual harassment is not tolerated. Sexual harassment includes physical or verbal abuse of a sexual nature including graphic commentaries about an individual's body, sexually degrading remarks used to describe an individual, or unwelcome propositions and physical advances of a sexual nature. The University of Miami’s policy is to promote a cooperative work environment in which mutual respect exists for all.

The social atmosphere at sea is very different from that on shore. When people work and live in close proximity for lengthy periods, personal and professional boundaries may become blurred. The usual shore-based distinctions between “at work” and “at home” become meaningless aboard ship. In general, while aboard you should be sensitive to the altered social conditions and atmosphere in which all must work and live. It is encouraged all sea-going personnel recognize the unique circumstances of shipboard life and take practical steps to prevent sexual harassment from occurring.

In the event that a member of the scientific party or crew feels that their personal rights have been abused, the individual may find it appropriate to speak with the ship's Captain and/or the Chief Scientist about the potential harassment. In the case of overt sexual harassment, it is the aggrieved person's right and obligation to report the offense. Failure of a supervisor to take immediate & appropriate action when
inappropriate conduct existed – whether it was known or should have been known - will place that supervisor in serious jeopardy should future legal action be warranted. As an assault upon the individual's rights and dignity, it is clearly inconsistent with, and unacceptable to, the standards of the University of Miami.

In addition to sexual harassment being illegal, it is also against the law to retaliate against someone for complaints or participation in an investigation of sexual harassment. Retaliation is against the University's policy. Retaliation against any person who, in good faith, reports alleged harassment, or who knowingly makes false and malicious complaints of sexual harassment, may be subjected to appropriate discipline.

**Dangerous Items**
Sharp objects, guns, firearms, martial arts or self-defense items, explosives, flammable materials, or disabling chemicals are not permitted aboard the R/V WALTON SMITH.

**Fresh Water**
Fresh water can be limited, especially when operating in waters that might restrict the use of the ships' water making equipment. Please make every effort to conserve water.

**Smoking**
Smoking is not permitted in any interior space aboard. Smoking is permitted only on the aft deck. Please be aware there is no smoking in areas such as near fuel stations and flammable storage areas. Take note of “No Smoking” signs in critical areas. Do not throw tobacco waste overboard; proper receptacles are available on the aft deck.

**Nighttime or Foul Weather**
At night, or when in foul weather, you must use extra caution moving about the vessel. Do not go out on deck alone. If you must go out on deck alone, inform another crewmember or scientific party.

**Bridge**
Please request permission to enter the bridge anytime the vessel is underway. Preparing for departure, during anchoring, or while entering a harbor or channel are busy times on the bridge therefore please refrain from entering the bridge during those times. When entering the bridge at night make sure that you do not introduce unwelcome light, which can interfere with the watch standers night vision.

**Engine Room**
Never enter the engine room area without the company of a crewmember. It is a noisy, hazardous environment and it is easy for inexperienced personnel to be injured.

**Illness**
Please do not expect to sail if you are ill. The chance of infecting others with a contagious sickness like a cold or the flu (influenza) is great. The Captain is entrusted with ensuring the safety and well-being of everyone aboard and has the authority and responsibility to deny passage to anyone that is suspected of being ill.

**Drugs and Alcohol**
It is the policy of the University of Miami to provide a safe working environment. In order to do so, the University has established policies and procedures regarding the use and possession of intoxicants including drugs and alcohol. The possession or use of
alcoholic beverages or illegal drugs while aboard the R/V WALTON SMITH is prohibited.

The Captain is empowered to conduct searches of personal effects, as well as any space aboard vessel, based on reasonable suspicion that illegal substances may be present. The R/V WALTON SMITH complies with United States federal regulations governing possession and/or use of illegal or controlled substances.

Alcoholic beverages are not allowed aboard the R/V WALTON SMITH. No one may bring, possess or consume alcohol onboard. Do not report for duty while under the influence of alcohol - whether the vessel is in port or at sea. Based on reasonable suspicion, the Captain is authorized and empowered to search any part of the vessel at any time for alcoholic beverages.

Any person in violation of this policy is subject to immediate removal from the ship as well as additional actions that may include, but are not limited to, administrative actions involving the person involved, their research group, their employer, their funding agency, and UNOLS.

In the event liquor is purchased in a foreign port, it must be surrendered to the Captain to hold until ship arrives at the next port and an individual’s departure.

3. MOVING ABOARD

While the R/V WALTON SMITH is located at the RSMAS dock, the scientific party will normally be allowed aboard the evening prior to the scheduled sailing date. Please confirm with Marine Operations prior to your arrival. It is the responsibility of the Chief Scientist to assign and post a berthing plan for the scientific party.

When you arrive at the dock with your personal gear to go aboard the vessel, check in with the Chief Scientist who will give you your stateroom assignment. Now is the time to secure all your gear so that it will stay in place under sea conditions, not after the rolling and pitching begins. This is also the time to familiarize yourself with the emergency station card next to your bunk. This gives the number of your lifeboat station for boat drills and the place to which you report for fire and emergency drills. Get your gear settled and stowed away before you go on to explore other aspects of your new environment.

If you brought aboard, or are responsible for laboratory equipment or other scientific gear, see that it is aboard and secured. Seek the advice and help of the crew if you have any questions.

A few points while aboard:
- Bed linen, towels and washcloths will be provided and exchanged weekly
- Please stow your personal gear in the storage provided in staterooms
- Meals service times will be posted in the crews mess
- Do not take food to your stateroom
- Bring sunscreen, sun protection gear, non-slip closed toed shoes and foul weather gear
- There is a TV with a DVD player on the mess deck. We welcome favorite movies, books, or music to share.
While some items may be available, please bring personnel items, over-the-counter medications, treats, or specific items (i.e. particular juices, gum, tea bags, supplements, flavored coffee creamer, whatever you cannot live without).

4. FOR YOUR SAFETY

After finding your stateroom and stowing your personal gear please do the following:

- Locate your life jacket.
- Locate the inflatable life rafts.
- Locate all escape routes, doors & hatches.
- Locate fire extinguishers throughout ship.
- Locate work vests and hard hats.
- Locate the First Aid Kits.

The R/V WALTON SMITH carries a complete inventory of medical supplies appropriate to a vessel her size. The crew is trained to handle most common medical emergencies. However, not every situation can be predetermined; therefore, it is very important all operations are conducted with the utmost focus on safety to prevent potential accidents and injuries.

5. EMERGENCY SIGNALS

Abandon Ship
The signal for abandon ship is seven or more short blasts followed by one long blast of the ship’s whistle and general alarm. When this signal is heard, report to your designated life raft station. There the Mate in charge will explain the procedures for launching and embarking into the life rafts. The rafts will not be launched during a drill.

Fire and Emergency
The signal is one long blast on the ship’s whistle and general alarm bell, lasting for ten seconds or more. During this drill, members of the science party muster in the designated area. Attendance will be taken and reported to the bridge.

Man Overboard
If someone falls overboard, throw a life-ring into the water towards the person. Keep your eye on the person at all times and point towards the person. Shout “MAN OVERBOARD, STARBOARD (or PORT),” and call the bridge on the sound powered phone or squawk box to inform them without losing sight of the person if possible. If you hear someone hail "Man Overboard," pass the word to the bridge.

6. GOOD SAFETY HABITS

It is strongly recommended that you let someone know where you will be at all times. The disappearance of someone for several hours can be cause for major alarm, which is easily avoided by telling your roommate or co-worker. Do not go out on the deck alone in rough weather or at night. Rough seas and/or darkness make it almost impossible to find someone who has fallen over the side.

Sensible clothing is a part of good safety habits. NEVER go barefoot. Sandals of any kind are not safe. Wear shoes with non-skid soles, especially on deck. Safety-toe shoes are recommended if you are working on deck with heavy gear. Loose or floppy clothing,
long hair, and/or jewelry may be caught in machinery resulting in an injury. Work vests and hard hats are required for personnel working around moving loads and overboard/recovery operations.

Wear a hat and sunglasses (use sunblock) if you are sensitive to the sun. Its effects are more intense at sea. Have medication for seasickness. If you are prone to it, start taking the medication twenty-four hours before the ship leaves the dock. Caution to women -- certain classes of these medications should not be taken during pregnancy. Consult with your doctor.

The Captain is in charge of the ship's hospital and general medical care. If you can anticipate the possibility of having a medical problem, or if you are dependent upon a specific medication, discuss this with the Captain before the cruise departs. S/He may deem it wise to stock a spare quantity of any medication(s) necessary to your basic good health. In the event of major medical emergencies, the ships will obtain advice via the radio medical advisory service from shore stations or seek assistance from nearby ships with a doctor onboard. Evacuation for medical care to shore or another ship’s hospital will be undertaken if indicated.

Be aware that lines and wires can part under tension. Do not stand under or near a line or wire while it is under a heavy strain. STAY CLEAR. Never step inside the bight (loop) of a line or wire. Respond immediately to directions from the crew. They are trying to preserve the safety of all, not prevent you from going somewhere.

When a crane is in operation, be aware of the location of its load at all times and stay out from underneath. If you are working on deck while a crane is in operation, you are required to wear safety hardhat. When working at or near the side of the ship or stern, work-vests must be worn. These are provided by the ship.

The disposal of plastics in any form is prohibited on the waterways of the world. The ship’s waste management procedures are posted. Learn the procedures and follow them.
SECTION I - POST CRUISE REQUIREMENTS

1. SHIPBOARD CLEAN-UP PROCEDURES

At the conclusion of each cruise, all areas used by scientific party must be cleaned as described:

- **Wet/Dry Labs:** Remove all scientific equipment, empty all trash into proper receptacles, wipe down bulkheads with damp cloth and dry with clean rags, sweep and mop deck, wipe off benches, cabinets, clean sinks and faucets.
- **Staterooms:** Strip bunks of linens, deposit towels and linen in furnished laundry bags, wipe down furniture and bulkheads, fold blankets and put them at the foot of the bunk.
- **Heads and Showers:** Clean toilets and wipe down outside of bowl; clean sinks, mirror, soap dish, and faucets; wipe down shower bulkheads and deck; sweep and mop deck; and empty wastebasket.
- **Passageways, stairs:** Sweep and mop.
- **Scientific Freezers and Refrigerators:** Once all samples are removed, wipe down inside and outside of all units used during the cruise.

The crew will furnish all cleaning equipment and supplies. The Captain is responsible for the inspection of these areas prior to the departure of the scientific party. A clean vessel was provided - please respectfully do the same for the next scientific party.

2. OFFLOADING

The R/V WALTON SMITH is normally offloaded on the day of arrival in port. The ship's crane will be available to assist in the offloading of heavy scientific gear. The crew will operate the ship's loading equipment during the offloading process. Please do not depend on the crew to assist in the offloading of small, hand-carried science gear as they will likely be preparing the vessel and conducting maintenance for the next cruise.

3. DISEMBARKING

The scientific party is expected to leave the vessel within a reasonable period after arrival at the dock. If more time is needed, the Chief Scientist must consult with the Captain on the kind of extension is needed.

4. UNOLS’ POST CRUISE FORMS AND REPORTS

The Chief Scientist is requested to complete a UNOLS Post Cruise Assessment Report (PCAR) at the completion of the cruise. This form is used by UNOLS to assess the degree of success achieved in accomplishing the cruise’s scientific objectives from the PI or Chief Scientist’s perspective. The online form can be found at [http://strs.unols.org/Public/diu_pre_pcar.aspx](http://strs.unols.org/Public/diu_pre_pcar.aspx)

Once completed the form is disseminated to UNOLS, the funding agency of the cruise, RSMAS Marine Operations, RSMAS Marine Technology Group as well as serving as a historical record of the cruise. We respectfully ask that any major issues you encountered during your cruise be addressed and discussed with the Captain or Director prior to report completion. It is our desire to provide a safe, efficient and
pleasant experience aboard the R/V WALTON SMITH. Communication is vital to vessel and procedural improvements. Contact Marine Operations for the proper cruise number.

The same UNOLS assessment report is completed by the R/V WALTON SMITH’s Captain and Marine Technician to assess the degree of success of the cruise from their unique perspective. Their reports are distributed the same as the Chief Scientist's report.

All forms and resources listed or referenced in this manual are available upon request from UM Marine Operations or at the F.G. WALTON SMITH Cruise Planning website at http://www.rsmas.miami.edu/resources/marine-department/cruise-planning-manual/.
