

## **AMBIENT Content Questions**

### Carbon Dioxide Lab

1. In general terms, photosynthesis is:
  - a. water plus carbon dioxide producing sugar and oxygen
  - b. hydrogen plus oxygen producing water and air
  - c. water plus carbon monoxide making hydrogen and carbon dioxide
  - d. sugar and oxygen making water and hydrogen gas
  
2. Where do fish get their oxygen?
  - a. From the water
  - b. Through their gills
  - c. When they surface
  - d. They don't need oxygen
  
3. What would be the most important result of deforestation for species survival?
  - a. Fewer trees
  - b. Less oxygen
  - c. Decreased habitat diversity
  - a. More carbon dioxide production
